(54) Title: INTERLOCKED VIBRATION REDUCTION MOUNT

(57) Abstract: A vibration reduction mount (10) is provided having an improved construction in which the mount includes a housing element (12) having an opening (30) adapted to receive a core element (14) with the core element (14) being rotatable after insertion into the housing element (12) or interlocking the core element (14) in the housing element (12). An elastomeric material (16) is then injected into the housing element (12) in order to secure the core element (14) within the housing element (12) and to provide an elastomeric spring for reducing vibrations transmitted from a first member to a second member.
